Your 7-day digital security plan

Ten minutes a day, one job per day. Tick each day.

Day 1 Your email account first

- New password, at least 15 characters, used nowhere else.
- Turn on two-step verification.
- Why first: every “forgot password” link lands here.

Day 2 Put every password in one place

- Move passwords out of your browser or notes into a password manager, then delete the export file (and empty the bin).
  - **SyncPass:** Settings → Import & Export, CSV or JSON. The free version holds 15 items.

Day 3 Change the reused ones

- Start with your top 5: email, bank, mobile carrier, social, shopping.
- Change each one on the site first, then save it in the vault.
  - **SyncPass:** the security score lists weak and reused passwords.

Day 4 Two-step verification

- Turn it on for banking, social and shopping.
- Pick an app or a passkey over SMS when offered.
- Save recovery codes.
  - **SyncPass:** passkeys; 2FA codes with live countdown are **Premium**.

Continued on page 2 →

Day 5 Recovery options

- Check the recovery phone and email on important accounts; use an address you check often, not your sign-in email.
- Create SyncPass's recovery QR code in case you forget your master password, print it and keep it safe.

Day 6 Your phone

- Screen lock with a PIN that's hard to guess.
- Turn on remote find/lock/erase before you need it.
- Turn on automatic updates.

Day 7 Breach check and old accounts

- Check your passwords against known breaches and change any that show up.
- Close accounts you no longer use.
  - **SyncPass:** breach check is **Premium**; only the first 5 characters of a hash leave your phone.

After: 5 minutes a month. Look at your security score, add new accounts.
